

## Devon Macromoth Flight Seasons (2000 to 2020) - in taxon order

These tables have been created as follows:

1. The records data are extracted from the the Devon moth database from 2000 to 2020.
2. Month columns (labelled J, F, M, etc) show the number of records for that month.
  - On Page 1 of the table, the numbers immediately under the Month label give the total species count for that month.
  - The 'Tot.' column shows the total number of records for the species.
  - The 'Tets.' column shows the number of tetrads where the species has been recorded.
3. For space reasons where the monthly record count is >999 or the total count is <9999, they are shown as thousands, eg, 1,256 is shown as 1.2k or 13,568 is written as 13.5k.
4. Species with fewer than 5 total records (Threshold 1) over this period are omitted.
5. Months with fewer than 2 species records (Threshold 2) are omitted.
6. Record count is shown as High, Mid or Low for each species:
  - High is  $\geq$  the square root of the maximum monthly record count.
  - Mid is  $\geq$  the square root of the High threshold value.
  - Low is  $<$  the Mid threshold value.

**KEY:**

Start = 2000

End = 2020
